F FORGED BY FREEDOM

Custom Coaching Program

Comprehensive Recomposition Protocol

Hayden Smith

Program Start: March 24, 2026

Client Overview

HEIGHT	CURRENT WEIGHT	GOAL WEIGHT
6'2"	235 lbs	205–210 lbs

TO LOSE
25–30 lbs

- **Activity Level:** Very active — BJJ athlete (3–4x/week)
- **Primary Sport:** Brazilian Jiu-Jitsu
- **Training Goal:** Lean, functional, mat-ready at 205–210 lbs
- **Diet Approach:** Moderate carb (higher for BJJ glycogen demands), high protein

- **Weigh-In Day:** Monday mornings (fasted, before eating)

🎯 Daily Targets

CALORIES	PROTEIN	CARBS
2,400	240g	180g
FATS	**DAILY STEPS**	**WATER**
70g	10,000	120+ oz

BJJ Nutrition Note

As a very active BJJ athlete, your carb intake is intentionally higher than a standard recomp protocol. Rolling depletes glycogen rapidly — underfueling carbs will tank your performance on the mat, slow recovery, and increase injury risk. Carbs are timed around training and rolling sessions for maximum performance benefit. On rest days, you can pull carbs down to ~140g and redistribute those calories or simply eat slightly under target.

FBF Recomp Protocol

HIGHLY RECOMMENDED

Body Recomposition — The Optimal Path

Rather than a pure cut, we strongly recommend the FBF Recomp Protocol. At 235 lbs with a high training volume (lifting + BJJ), you are in an ideal position to simultaneously lose body fat and build lean muscle. This approach preserves performance on the mat, avoids muscle loss from aggressive dieting, and produces a more dramatic visual transformation while keeping you strong and competitive.

How the Recomp Protocol Works

- **High Protein Anchor (240g/day):** Protein stays constant every single day. At 235 lbs with high training volume, you need ~1g/lb to drive muscle protein synthesis and recovery from both lifting and BJJ.
- **Strategic Carb Placement:** Carbs are timed around training and rolling sessions (pre/post) to fuel performance and glycogen replenishment. Higher carbs on BJJ days, slightly lower on rest days.
- **Moderate Caloric Deficit:** 2,400 calories keeps you in a deficit for fat loss (~400–500 below maintenance given your activity level) without compromising mat performance or recovery.
- **Progressive Overload Training:** The 4-day lifting program builds the strength and muscle that makes you dangerous on the mat. BJJ alone won't build the structural strength you need.
- **BJJ Synergy:** Your rolling sessions provide high-intensity cardio, grip endurance, and sport-specific conditioning. Combined with structured lifting, this is the ultimate recomp environment.
- **Peptide Support:** The recommended peptide stack accelerates fat oxidation, supports joint/tissue recovery (critical for grapplers), and enhances sleep quality — all drivers of recomp.

Expected Timeline

Weeks 1–4: Body adapts, strength begins climbing, scale may not move much (this is normal — recomp is happening). Weeks 5–12: Visible changes in the mirror, clothes fit differently, strength PRs weekly, rolling feels easier at a lighter weight. Weeks 12–24: 25–30 lbs of fat lost, significant lean mass gained. Target

weight of 205–210 lbs achieved with dramatically improved body composition, mat performance, and gas tank.

Training Program

4-DAY UPPER/LOWER

Progressive overload: when you hit the top of the rep range with good form on all sets, increase weight by the smallest increment available next session. Log every set in the app. This program is designed to complement your BJJ training — grip work, rotational core, posterior chain emphasis, and shoulder prehab are built into every session.

Day 1 — Upper Body Push + Shoulder Prehab

MONDAY

EXERCISE	SETS	REPS	REST
Dumbbell Incline Press 30–45° incline, full stretch at bottom, controlled tempo	4	8–10	90s
Machine Chest Press Slow eccentric (3 sec down), squeeze at top	3	10–12	75s
Dumbbell Shoulder Press (Seated) Neutral or standard grip — protect shoulders for rolling	3	10–12	75s
Cable Lateral Raise Behind body, controlled tempo, light weight	3	12–15	60s
Tricep Rope Pushdown Squeeze and spread at bottom	3	12–15	60s
Face Pulls (Rope) External rotation at top — shoulder health/prehab. Critical for grapplers.	3	15–20	45s
Band Pull-Aparts Rear delt/rotator cuff activation. Superset with face pulls.	3	20	30s

Day 2 — Lower Body + Posterior Chain & Core

TUESDAY

EXERCISE	SETS	REPS	REST
Leg Press Feet shoulder width, mid-platform, full depth	4	10–12	2 min
Romanian Dumbbell Deadlift Dumbbells along sides, hinge deep, feel hamstrings stretch — BJJ hip hinge power	4	8–10	90s

EXERCISE	SETS	REPS	REST
Walking Dumbbell Lunges Controlled, single-leg stability for grappling balance	3	12/leg	75s
Leg Curl (Lying or Seated) Pause 1 sec at contraction, slow eccentric	3	12–15	60s
Cable Pallof Press Anti-rotation core — directly transfers to framing and guard retention	3	12/side	60s
Hanging Knee Raises Controlled, no swinging — grip endurance bonus	3	12–15	60s

Day 3 — Upper Body Pull + Grip Strength

THURSDAY

EXERCISE	SETS	REPS	REST
Lat Pulldown (Wide Grip) Full stretch at top, drive elbows down — lat strength for guard pulling	4	8–10	90s
Seated Cable Row (Towel Grip) Wrap a gym towel over the handle — grip strength for gi grips	3	10–12	75s
Dumbbell Row (Single Arm) Bench supported, full stretch, squeeze at top	3	10–12	75s
Machine Rear Delt Fly Light weight, squeeze and hold — shoulder stability	3	15–20	45s
Dumbbell Bicep Curl Alternating, slight supination	3	10–12	60s
Farmer's Carries Heavy dumbbells, 40–60 yard walks — grip endurance is king in BJJ	3	40–60 yds	90s
Dead Hangs Hang from pull-up bar as long as possible — grip endurance + shoulder decompression	3	30–60s	60s

Day 4 — Lower Body + Rotational Core & Hip Mobility

FRIDAY

EXERCISE	SETS	REPS	REST
Hip Thrust (Machine or Barbell) Pause 2 sec at top, full hip extension — bridging power for BJJ escapes	4	10–12	90s
Bulgarian Split Squat (Dumbbells) Rear foot on bench, controlled descent — single-leg strength for base	3	10/leg	75s
Leg Extension Pause 1 sec at top, slow eccentric	3	12–15	60s
Standing Calf Raise (Machine) Full ROM, 2 sec pause at bottom stretch	4	10–12	60s
Cable Woodchops High-to-low and low-to-high — rotational power for sweeps and throws	3	12/side	60s
Neck Curls / Neck Harness Light weight, high reps — neck strength is injury prevention for grapplers	3	15–20	45s
90/90 Hip Switches (Bodyweight) Hip mobility flow — 90/90 position, switch sides smoothly. Do as finisher.	3	10/side	30s

BJJ-Specific Training Notes

- **Grip Strength:** Towel grip rows, farmer's carries, and dead hangs are built into the program. Your grip is your first line of offense and defense on the mat.
- **Neck Strengthening:** Neck curls protect against guillotines, cranks, and general grappling forces. Start light and build gradually.
- **Rotational Core:** Pallof presses and cable woodchops develop the anti-rotation and rotational power needed for sweeps, guard retention, and scrambles.
- **Hip Mobility:** 90/90 switches at the end of lower body days keep your hips open for guard work. Add thoracic spine rotations during warm-ups.
- **Shoulder Prehab:** Face pulls and band pull-aparts every upper body day. Your shoulders take enormous stress from gripping, framing, and being stacked. Prehab prevents missed mat time.

Cardio Protocol

BJJ-INTEGRATED

BJJ as Primary Cardio

- **BJJ Training (3–4x/week):** Your rolling sessions ARE your high-intensity cardio. A 90-minute BJJ class with live rounds is equivalent to or exceeds any HIIT protocol. Do not add additional HIIT on BJJ days.
- **Non-BJJ Days — Incline Walk:** 20–25 min incline treadmill walk (10–12% incline, 3.0–3.5 mph). Low-impact, promotes recovery blood flow, burns fat without taxing your CNS or joints.
- **Daily Step Target:** 10,000 steps minimum. Walk the dog, take calls walking, park far. Steps are your fat-loss foundation.
- **Weekends (Active Recovery):** Light rolling, open mat, mobility/yoga, higher step goals (12,000+ steps). No intense lifting on weekends.

Hydration & Electrolytes — CRITICAL for BJJ Athletes

You sweat more than almost any other athlete category. A 90-minute rolling session can dump 2–4 lbs of water weight. Dehydration kills performance, cognition, and recovery. **120+ oz water daily** is your minimum. On BJJ days, add an extra LMNT packet before or during class. Weigh yourself before and after rolling — every pound lost is ~16oz of water you need to replace.

Meal Plan

HIGH PROTEIN · BJJ PERFORMANCE

All meals are designed for easy batch prep. Family-friendly recipes that scale easily. Carbs are concentrated around training and rolling for maximum performance. Adjust portions on rest days (pull carbs down ~40g, keep protein the same).

MEAL 1 — MORNING (7:00 AM)

Egg White & Turkey Scramble with Oats

1 cup liquid egg whites + 4 oz 99% lean ground turkey scrambled with spinach and bell peppers. Side: 1/2 cup dry oats cooked with cinnamon and 1 tbsp almond butter.

520 cal **52g** protein **38g** carbs **14g** fat

MEAL 2 — PRE-TRAINING (11:00 AM)

Chicken & Rice Power Bowl

8 oz grilled chicken breast over 3/4 cup jasmine rice. Top with 1/4 avocado, salsa, and a squeeze of lime. Side: steamed broccoli (1 cup).

560 cal **56g** protein **48g** carbs **12g** fat

MEAL 3 — POST-TRAINING (3:00 PM)

Whey Protein Shake + Banana + Rice Cakes

1.5 scoops whey protein isolate blended with water and ice. 1 medium banana. 2 plain rice cakes with a thin spread of honey. Fast-digesting carbs to replenish glycogen after rolling or lifting.

380 cal **42g** protein **48g** carbs **4g** fat

MEAL 4 — DINNER (6:30 PM)

Salmon with Roasted Sweet Potato & Vegetables

7 oz wild-caught salmon fillet, baked with lemon and garlic. Side: 1 medium sweet potato (baked or cubed/roasted), 1.5 cups roasted broccoli and asparagus tossed in 1 tsp olive oil.

580 cal **50g** protein **38g** carbs **22g** fat

MEAL 5 — EVENING (9:00 PM)

Casein Pudding + Peanut Butter

1.5 scoops casein protein mixed thick with minimal water. Stir in 1.5 tbsp natural peanut butter. Slow-digesting to fuel overnight recovery and tissue repair from BJJ.

340 cal **40g** protein **8g** carbs **18g** fat

TOTAL CALORIES	TOTAL PROTEIN	TOTAL CARBS
2,380	240g	180g
~2,400 target		

TOTAL FATS
70g

Meal Prep Tips

- Sunday: batch-cook chicken breasts, ground turkey, and salmon. Roast all vegetables and sweet potatoes for the week.
- Pre-portion oats in jars with dry cinnamon — just add water in the morning.
- Cook rice in bulk (3–4 cups dry). Portion into containers. Reheat with a splash of water.
- Keep bananas and rice cakes stocked for quick post-training fuel.
- Family-friendly: all meals scale easily. Double protein and carb portions for family prep.
- **Water:** Minimum 120 oz daily. On BJJ days, aim for 140+ oz. Keep a gallon jug visible.

Swap Options (variety without re-counting macros)

- **Chicken** → 93% lean ground turkey, shrimp, or white fish (same oz)
- **Salmon** → Cod + 1 tsp olive oil, or tuna steak
- **Egg whites** → 1.5 scoops whey + 2 whole eggs
- **Jasmine rice** → Sweet potato, quinoa, or whole wheat pasta (same cooked volume)
- **Sweet potato** → 3/4 cup jasmine rice or 1/2 cup butternut squash
- **Broccoli** → Zucchini, green beans, Brussels sprouts
- **Banana** → 1 cup berries or 2 tbsp honey in shake

Weekly Shopping List

MEAL PREP

Everything you need for one week of meal prep. Quantities are for Hayden only — adjust if prepping for the family. Shop Sunday, prep Sunday afternoon.

ITEM	QTY (7 DAYS)	NOTES
PROTEIN		

ITEM	QTY (7 DAYS)	NOTES
Chicken Breast (boneless, skinless)	3.5 lbs	8oz/day × 7 = ~56oz. Buy ~3.5 lbs to account for shrinkage.
99% Lean Ground Turkey	2 lbs	4oz/day × 7 = 28oz. One family-size pack.
Wild-Caught Salmon Fillets	3 lbs	7oz/day × 7 = 49oz. Fresh or frozen — both work.
Liquid Egg Whites	2 cartons (32oz each)	1 cup/day × 7. Two standard cartons covers the week.
DAIRY & PROTEIN POWDER		
Whey Protein Isolate	1 tub (2 lb)	1.5 scoops/day. Lasts ~2 weeks.
Casein Protein	1 tub (2 lb)	1.5 scoops/day. Lasts ~2 weeks.
VEGETABLES & PRODUCE		
Broccoli (fresh crowns)	4–5 heads	Used in lunch bowls and dinner sides. Buy crowns for easy chopping.
Asparagus	2 bunches	Pairs with broccoli for dinner roast.
Baby Spinach	1 large container (16oz)	For morning scrambles. Pre-washed saves time.
Bell Peppers (any color)	4–5 peppers	For morning scramble. Dice and store in container.
Sweet Potatoes	5–6 medium	1 medium/day for dinner. Cube and roast in batch.
Avocados	2–3	1/4 per day in lunch bowl. Buy firm, they'll ripen through the week.
Bananas	7–8	1/day for post-training shake. Buy slightly green.
Lemons	3–4	For salmon prep and lunch bowls.
Limes	3–4	For chicken rice bowls.
Garlic (whole head)	2 heads	For salmon + roasted veggies. Mince in bulk.

ITEM	QTY (7 DAYS)	NOTES
Salsa (jar)	1 jar (16oz)	For chicken rice bowls. Low-sugar variety.
PANTRY & GRAINS		
Jasmine Rice	2 lb bag	3/4 cup cooked per day. One bag lasts 2+ weeks.
Old-Fashioned Oats	1 canister (18oz)	1/2 cup dry per day. One canister lasts 2+ weeks.
Rice Cakes (plain)	1 package	2/day post-training. Lasts 1–2 weeks.
Honey	1 bottle (12oz)	Thin spread on rice cakes post-training. Lasts weeks.
Olive Oil (extra virgin)	1 bottle	For roasting veggies. Lasts multiple weeks.
Cinnamon (ground)	1 jar	For oats. Lasts months.
NUTS & BUTTERS		
Almond Butter (natural)	1 jar (16oz)	1 tbsp/day in oats. No added sugar. Lasts 2+ weeks.
Natural Peanut Butter	1 jar (16oz)	1.5 tbsp/day in casein pudding. Ingredients: peanuts, salt.
BEVERAGES & ELECTROLYTES		
LMNT Electrolyte Packets	2 boxes (30-ct each)	1–2 servings/day. CRITICAL for BJJ athletes. Use before/during rolling.
Water (gallon jugs or filter)	120+ oz/day target	Keep a gallon jug visible. 140+ oz on BJJ days.
Coffee (ground or beans)	1 bag (12oz)	Optional. Lasts 1–2 weeks.
MEAL PREP SUPPLIES		
Glass Meal Prep Containers	14–20 containers	2–3 per day (lunch + dinner + extra). Glass reheats better than plastic.

ITEM	QTY (7 DAYS)	NOTES
Parchment Paper or Foil	1 roll	Line sheet pans for easy roasting cleanup.

Prep Day Game Plan (Sunday)

- **Step 1:** Season and bake all chicken breasts and salmon fillets (425°F, 20–25 min)
- **Step 2:** While protein bakes — cube sweet potatoes, chop broccoli and asparagus, toss with olive oil, roast on separate sheet pans (400°F, 25 min)
- **Step 3:** Brown all ground turkey with diced peppers and spinach in a large skillet. Season with salt, pepper, garlic powder.
- **Step 4:** Cook rice in bulk (3–4 cups dry). Portion into 7 containers.
- **Step 5:** Portion oats into 7 jars with cinnamon. Slice bananas day-of (don't pre-slice).
- **Step 6:** Assemble containers — protein + veggies + carb source per meal. Label if helpful.
- **Total time:** ~90 minutes for a full week of meals. Faster with help.

Estimated Weekly Grocery Cost

- **Protein:** ~$60–80 (chicken, turkey, salmon, egg whites)
- **Produce:** ~$25–35 (vegetables, avocados, sweet potatoes, bananas, lemons)
- **Pantry/Grains:** ~$12–18 (rice, oats, rice cakes, honey, oils — many last multiple weeks)
- **Nuts/Butters:** ~$8–12 (almond butter, peanut butter — last 2+ weeks)
- **Beverages/Electrolytes:** ~$15–20 (LMNT, coffee)
- **Weekly total:** ~$120–165 for one person (first week slightly higher for pantry staples)

Supplement Protocol

Creatine Monohydrate

5g/day

Any time (with meal)

Most researched supplement in existence. Strength, hydration, cognitive benefits. Improves power output for explosive grappling movements.

LMNT Electrolytes

1–2 servings/day

Morning + before/during BJJ

CRITICAL for BJJ athletes who sweat heavily. Sodium, potassium, magnesium. Prevents cramping, brain fog, and performance drop during rolling. Non-negotiable.

Potassium

99–200mg 2x/day

With meals (AM + PM)

Additional potassium support beyond LMNT. Prevents cramping during intense rolling sessions. Essential for athletes in a caloric deficit.

Whey Protein Isolate

1–1.5 scoops/day (25–38g protein)

Post-training shake

Fast-absorbing for post-training recovery. Low-carb isolate preferred.

Casein Protein

1.5 scoops/day (38g protein)

Before bed

Slow-release for overnight recovery & muscle protein synthesis. Especially important for combat athletes with high tissue repair demands.

Omega-3 Fish Oil

2–3g EPA/DHA daily

With meals (split dose)

Anti-inflammatory, joint support, brain health. Grapplers need this for joint longevity.

Magnesium Glycinate

400mg/day

Before bed

Sleep quality, recovery, muscle relaxation. Most people are deficient. Helps with post-BJJ muscle tension.

Vitamin D3 + K2

5,000 IU D3 + 100mcg K2

Morning with fat-containing meal

Immune function, bone health, testosterone support. Essential for athletes training at high intensity.

Zinc (Optional)

30mg/day

Before bed (with magnesium)

Immune support, testosterone production, recovery. Important for athletes with high training volume. Take on an empty stomach.

Peptide Protocol

FBF RECOMP STACK

Recommended Recomp Peptide Stack

This peptide combination is the backbone of the FBF Recomp Protocol. It enhances fat burning, dramatically improves recovery (critical for BJJ athletes), deepens sleep, and accelerates tissue repair from the daily micro-trauma of grappling. All peptides are administered via subcutaneous (SubQ) injection only.

CJC-1295 / Ipamorelin

300mcg CJC / 300mcg Ipamorelin

Subcutaneous injection — before bed (fasted 2+ hours)

Growth hormone releasing peptide combo. Enhances deep sleep, accelerates fat loss, supports lean muscle growth. The cornerstone of the recomp stack. Does not interfere with natural GH pulsatility. ***BJJ Relevance:*** *Improved recovery between sessions means you can train harder and more frequently. Better sleep = faster central nervous system recovery after intense rolling.*

BPC-157

250–500mcg/day

Subcutaneous injection — AM or split AM/PM

HUGE for BJJ athletes. Accelerates tissue repair, tendon/ligament healing, gut health, and joint recovery. Grapplers put enormous stress on fingers, wrists, shoulders, elbows, and knees. BPC-157 speeds repair of all connective tissue. This is your #1 longevity peptide for combat sports. Can be injected near the site of injury for localized benefit.

Tesamorelin

2mg/day

Subcutaneous injection — before bed (fasted)

FDA-approved GHRH analog. Specifically targets visceral (belly) fat reduction. Ideal for recomp — preserves lean mass while reducing the most dangerous fat compartment. Synergistic with CJC/Ipamorelin for enhanced GH release. ***BJJ Relevance:*** *Better power-to-weight ratio on the mat without sacrificing strength.*

Thymosin Alpha-1

1.6mg 2x/week

Subcutaneous injection — any time

Immune modulator. BJJ gyms are petri dishes — staph, ringworm, and respiratory infections are constant risks. Thymosin Alpha-1 enhances immune resilience and T-cell function. ***BJJ Relevance:*** *Constant skin-to-skin contact and shared mats mean your immune system needs every advantage.*

PT-141 (Bremelanotide)

1–2mg as needed

Subcutaneous injection — 1-2 hours before desired effect

Thymosin Beta-4 (TB-500)

2.5–5mg 2x/week

Subcutaneous injection — AM or PM

Powerful tissue repair, anti-inflammatory, and flexibility-enhancing peptide. Promotes angiogenesis

Melanocortin receptor agonist for sexual wellness and libido enhancement. Works centrally via the nervous system rather than vascularly. Use as needed, not daily. Do not exceed 2mg per dose or use more than 8 doses per month.

*and cell migration to injury sites. **BJJ Relevance:** Perfect for grapplers — helps repair the constant micro-tears in muscles, tendons, and ligaments from rolling. Improves flexibility and range of motion for guard play and submissions. Synergistic with BPC-157 for accelerated healing.*

GHK-Cu

1–2mg/day

Subcutaneous injection — AM

*Copper peptide for skin rejuvenation, collagen synthesis, and wound healing. Stimulates production of glycosaminoglycans, decorin, and other structural proteins. **BJJ Relevance:** Accelerates healing of mat burns, gi rash, and skin abrasions that are constant in grappling. Supports connective tissue integrity long-term.*

Epithalon

5–10mg/day SubQ (10–20 day cycles)

Subcutaneous injection — AM or before bed

*Telomere lengthening peptide. Activates telomerase to protect chromosomal integrity. Anti-aging, improved sleep quality, and enhanced melatonin production. Run in 10–20 day cycles, then take 4–6 months off. **BJJ Relevance:** Better sleep quality = faster recovery. Longevity peptide for athletes who want to train into their 40s, 50s, and beyond.*

Selank

250–500mcg/day

Subcutaneous injection ONLY — NOT nasal

*Anxiolytic and cognitive-enhancing peptide. Modulates GABA, serotonin, and dopamine. Reduces anxiety without sedation or cognitive impairment. Administered via SubQ injection only. **BJJ Relevance:** Competition anxiety management — stay calm and focused under pressure. Enhances strategic thinking during matches without the fog of traditional anti-anxiety compounds.*

Semax

200–600mcg/day

Subcutaneous injection ONLY — NOT nasal

*Nootropic peptide derived from ACTH. Enhances BDNF (brain-derived neurotrophic factor), improves memory, focus, and neuroprotection. Administered via SubQ injection only. **BJJ Relevance:** BJJ is chess with your body — Semax sharpens pattern recognition, reaction time, and the ability to chain techniques. Ideal for drilling and competition prep.*

MOTS-c

5–10mg SubQ 3x/week

Subcutaneous injection — AM, preferably on training days

*Mitochondrial-derived peptide and exercise mimetic. Activates AMPK, improves insulin sensitivity, enhances fatty acid oxidation, and optimizes metabolic function. **BJJ Relevance:** Improves muscular endurance and metabolic efficiency — critical for 5-minute rounds. Helps your cells produce energy more efficiently so you don't gas out during late rounds.*

AOD-9604

300mcg/day

Subcutaneous injection — AM on empty stomach

*Modified fragment of human growth hormone (HGH fragment 176-191). Specifically stimulates lipolysis and inhibits lipogenesis without affecting blood sugar or growth. **BJJ Relevance:** Clean fat loss without muscle catabolism — make weight for competition while maintaining strength and mat performance. Stacks well with Tesamorelin for enhanced body composition.*

Dihexa

10–20mg SubQ 3x/week

Subcutaneous injection — AM

Research peptide — discuss with physician. *Potent cognitive enhancer, reported to be 10 million times more potent than BDNF at forming new synaptic connections. Supports neuroplasticity and memory.* ***BJJ Relevance:*** *Accelerates learning of new techniques and positional concepts. Enhances the neural pathways that make movements automatic under pressure.*

NAD+ (Injectable)

50–100mg SubQ or IV

Subcutaneous injection — AM (IV via clinic)

Nicotinamide adenine dinucleotide — essential coenzyme for cellular energy production, DNA repair, and sirtuin activation. Anti-aging at the cellular level. ***BJJ Relevance:*** *Faster recovery from training, improved cellular repair after hard rolling sessions. Combats the accelerated aging that high-volume training can cause. Supports mitochondrial function for sustained energy on the mat.*

Pentosan Polysulfate (PPS)

2–3mg/kg SubQ weekly

Subcutaneous injection — once weekly

Semi-synthetic polysaccharide with potent chondroprotective properties. Promotes joint cartilage repair, stimulates synovial fluid production, and supports intervertebral disc regeneration. ***BJJ Relevance:*** *Extremely relevant for grapplers — constant guard passing pressure, stacking, and spinal compression degrade cartilage and discs over time. PPS directly addresses the joint and spinal wear that ends BJJ careers. Protects knees, hips, and spine.*

Peptide Layering Schedule

Don't start everything at once. Layer peptides in over 8 weeks to assess tolerance and response:

- **Weeks 1–2:** CJC-1295/Ipamorelin + BPC-157 — establish the GH + recovery foundation
- **Weeks 3–4:** Add Tesamorelin + TB-500 — layer in visceral fat targeting and deep tissue repair
- **Weeks 5–6:** Add GHK-Cu + Epithalon cycle (10–20 days) — collagen, anti-aging, sleep optimization
- **Weeks 7–8:** Add MOTS-c + AOD-9604 — metabolic optimization and additional fat loss
- **Layer in others as desired:** Selank/Semax for competition prep, PT-141 as needed, Thymosin Alpha-1 for immune support, NAD+ for cellular energy, PPS for joint/cartilage protection, Dihexa for cognitive goals

Important Peptide Notes

- All peptides are administered via subcutaneous (SubQ) injection ONLY — no nasal sprays for any peptide
- Follow the layering schedule above to assess individual response and tolerance
- Store all peptides refrigerated. Reconstitute with bacteriostatic water only

- Rotate injection sites (abdomen, thigh, glute) to prevent lipodystrophy
- BPC-157 and TB-500 can be injected near the site of injury/pain for localized benefit (e.g., shoulder, knee, elbow)
- Epithalon is run in cycles (10–20 days on, 4–6 months off) — do not run continuously
- Dihexa is a research peptide — use under physician guidance only
- NAD+ can be administered SubQ at home or via IV infusion at a clinic for higher bioavailability
- Coordinate with your physician — provide this protocol sheet at your next appointment

Compound Recommendations

PHYSICIAN GUIDED

The following compounds are worth discussing with your physician. These are not self-prescribed — they require medical supervision, lab monitoring, and a doctor's guidance. Bring this document to your next appointment.

Retatrutide (Reta)

DISCUSS WITH DOC

Next-Generation Triple Agonist (GIP/GLP-1/Glucagon)

Retatrutide is a triple-hormone receptor agonist with clinical data showing profound improvements across nearly every metabolic marker. For BJJ athletes, it offers body composition improvement without sacrificing strength, cardio capacity, or mat performance.

Why Reta Matters for BJJ Athletes

- **Body composition without performance loss:** Unlike aggressive cutting, Reta helps shed fat while preserving lean mass and strength — you get lighter without getting weaker
- **Visceral fat targeting:** The glucagon receptor activation specifically targets the deep abdominal fat, improving your power-to-weight ratio on the mat
- **Improved insulin sensitivity:** Better glucose management means more stable energy during long rolling sessions
- **Appetite regulation:** Superior satiety signaling makes hitting your 2,400 cal target effortless
- **Resting metabolic rate:** The glucagon receptor activation increases resting metabolic rate — you burn more calories at rest

Titration Protocol (Physician-Guided)

- **Weeks 1–4:** 1mg/week subcutaneous injection — assess tolerance, monitor GI side effects
- **Weeks 5–8:** 2mg/week — body adapts, appetite regulation kicks in
- **Weeks 9–12:** 4mg/week — full therapeutic dose, maximum metabolic benefit
- **Weeks 13+:** Maintain at 4mg or adjust per physician guidance and lab results
- Inject once weekly, same day each week. Rotate injection sites.
- Monitor: weight, body composition, blood glucose, GI symptoms, energy levels

Tesofensine

DISCUSS WITH DOC

- **Mechanism:** Triple monoamine reuptake inhibitor — blocks reuptake of serotonin, dopamine, and norepinephrine
- **Fat loss:** Clinical trials showed 2x the weight loss of existing medications at the time of study
- **Thermogenic:** Increases resting metabolic rate and fat oxidation — you burn more calories at rest
- **Mood & Focus:** Dopamine and serotonin reuptake inhibition provides significant mood elevation, mental clarity, and focus — beneficial for athletes managing training stress, work, and family
- **Appetite suppression:** Powerful satiety signal that makes deficit adherence easy without feeling deprived
- **BJJ relevance:** The cognitive and mood benefits help with the mental game — focus during rolls, motivation during tough training blocks, and reduced perception of effort
- **Typical dose:** 0.25–0.5mg/day oral, physician-guided titration
- **Monitor:** Heart rate, blood pressure, sleep quality (can be stimulating — take AM only)

Testosterone Replacement Therapy (TRT)

LABS FIRST

- **Why it matters for combat athletes:** Recovery demands from BJJ are extreme — you're essentially doing full-body resistance training against another human 3–4x/week on top of your lifting program. Optimal testosterone levels are critical for recovery, tissue repair, and body composition.
- **Get labs first:** Total testosterone, free testosterone, SHBG, estradiol, LH, FSH, prolactin. Do NOT start TRT without baseline labs.
- **Signs of low T to watch for:** Persistent fatigue despite good sleep, difficulty recovering between sessions, stalled strength gains, low motivation, brain fog, decreased libido
- **If labs indicate low/suboptimal T:** Discuss TRT with your physician. Typical protocol: 100–200mg testosterone cypionate/week via SubQ or intramuscular injection, split into 2 doses/week for stable levels
- **Competition note:** If you compete in IBJJF or other sanctioned BJJ events, be aware of anti-doping policies. Discuss with your coach and physician.

- **Monitoring:** Re-test labs at 6 weeks, then every 3–6 months. Monitor hematocrit, PSA, lipids, estradiol

Recommended Lab Panel

BASELINE + ONGOING

Get these labs done before starting any compounds. Re-test at 12 weeks and every 3–6 months thereafter.

- **Metabolic Panel:** Fasting glucose, fasting insulin, HbA1c
- **Lipid Panel:** Total cholesterol, LDL, HDL, triglycerides, VLDL
- **Liver Panel:** ALT, AST, GGT, alkaline phosphatase, bilirubin
- **Kidney Function:** BUN, creatinine, eGFR, uric acid
- **Thyroid:** TSH, Free T3, Free T4
- **Hormones:** Total testosterone, free testosterone, SHBG, estradiol, LH, FSH, prolactin
- **Inflammation:** hs-CRP, ESR, homocysteine
- **CBC:** Complete blood count with differential (monitor hematocrit if on TRT)
- **Vitamins:** Vitamin D (25-OH), B12, ferritin, iron
- **PSA:** Prostate-specific antigen (baseline before any TRT consideration)

Baseline Assessments

ACTION REQUIRED

Before we begin, we need two baseline data points to track your progress accurately and make informed adjustments throughout your program. Both should be completed within your first week.

1. Blood Lab Panel

UPLOAD TO APP

Obtain a current or recent comprehensive blood panel (within the last 60 days). If you don't have one, request the full panel listed in the Compound Recommendations section from your physician.

- **Metabolic Panel:** Fasting glucose, fasting insulin, HbA1c
- **Lipid Panel:** Total cholesterol, LDL, HDL, triglycerides, VLDL
- **Liver Panel:** ALT, AST, GGT, alkaline phosphatase, bilirubin
- **Kidney Function:** BUN, creatinine, eGFR, uric acid
- **Thyroid:** TSH, Free T3, Free T4
- **Hormones:** Total testosterone, free testosterone, SHBG, estradiol
- **Inflammation:** hs-CRP, ESR, homocysteine
- **CBC:** Complete blood count with differential
- **Vitamins:** Vitamin D (25-OH), B12, ferritin, iron

Why This Matters

Your blood work gives us a complete picture of your metabolic health before we start. We'll re-test at 12 weeks and 24 weeks to measure improvements in cholesterol, liver enzymes, inflammation markers, and hormone levels. These objective markers — combined with your body composition changes and mat performance — tell the full story of your transformation. Upload your results directly in the FBF app under your profile, or send a photo/PDF to your coach via chat.

2. InBody Composition Scan

FREE AT YOUR GYM

Most gyms have an InBody scanner available to members at no charge. Complete your baseline scan within the first week.

- **What it measures:** Body fat %, lean muscle mass (per limb), visceral fat level, total body water, basal metabolic rate

- **When to scan:** Morning, fasted (same conditions as your weigh-in). Before your Monday workout is ideal.
- **How often:** Baseline (Week 1), then every 4 weeks. The InBody tracks skeletal muscle vs. fat changes — this is how we measure recomp, not just the scale.
- **What to expect:** Takes ~60 seconds. Stand on the machine, grip the handles, hold still. Ask the front desk to print your results sheet.
- **Upload:** Take a photo of your InBody results sheet and upload it to the FBF app with your first check-in, or send it via chat.

Why InBody Over Scale Weight

During a recomp, the scale can be misleading. You might lose 8 lbs of fat and gain 4 lbs of muscle — the scale only shows a 4 lb change, but your body looks completely different and you feel stronger on the mat. The InBody scan separates fat from muscle so we can verify that the protocol is working: fat going down, muscle going up. This is the gold standard for tracking recomp progress.

📱 Daily Check-In

Log Your Daily Check-In

Consistency is everything. Your daily check-in takes less than 2 minutes and gives your coach the data needed to keep your program dialed in. Tap the link below to open your check-in directly in the FBF app.

Open Daily Check-In

fbf://checkin

Scan to Check In

What to Log Every Day

- **Temperature:** Waking oral body temperature — immediately upon waking, before getting out of bed (see Temperature Check section below for details)
- **Body:** Morning weight (scale), how you look/feel, any progress photos
- **Nutrition:** Meals eaten, calorie/macro adherence, water intake
- **Activity:** Workout completed (exercises, weights, reps), step count, BJJ session details (duration, intensity, rounds)
- **Sleep:** Hours slept, quality rating (1–10), any disruptions
- **Supplements:** Which supplements/peptides were taken (compliance tracking)
- **Notes:** Energy level, mood, hunger, soreness, any injuries/tweaks from rolling

Weekly Check-In (Monday AM)

- **Weigh in** first thing Monday morning — after bathroom, before food/water
- **Progress photos** every 2 weeks (front, side, back) — same lighting, same time
- **Rate your week** 1–10 in the notes section — energy, mood, hunger, soreness, mat performance
- **BJJ log:** Number of sessions, total rolling time, any injuries or joint issues
- **InBody scan** every 4 weeks (fasted, Monday morning before workout)

Communication

Message your coach anytime through the FBF app chat. Response time is typically same-day. For injuries sustained during rolling, see a sports medicine physician — this program is designed to complement your medical care, not replace it.

Daily Temperature Check

METABOLIC TRACKING

Why We Track Your Morning Temperature

Your waking body temperature is one of the most underused and powerful biomarkers in coaching. It gives us a direct, daily window into your metabolic rate, thyroid function, recovery status, and overall hormonal health — all without a blood draw. This single data point, tracked consistently, can reveal problems weeks before they show up on lab work or the scale.

How to Take Your Temperature

- **When:** Immediately upon waking, before getting out of bed, before drinking water, before any activity
- **How:** Use a digital oral thermometer. Place under your tongue for the full reading cycle (usually 30–60 seconds). Do not talk or breathe through your mouth.
- **Where to log:** Record it in your daily check-in in the FBF app under the body/notes section
- **Keep your thermometer on your nightstand** — if you forget and get up first, the reading is no longer valid for that day
- **Consistency is key:** Same thermometer, same method, every single morning. The trend over days and weeks is what matters, not any single reading.

What Your Temperature Tells Us

Metabolic Rate & Thyroid Function

Your basal body temperature is a direct reflection of your metabolic rate — how much energy your body is producing at rest. Thyroid hormones (T3 and T4) are the primary regulators of this process.

- **Healthy range: 97.8°F – 98.6°F** upon waking indicates a well-functioning metabolism and adequate thyroid output
- **Consistently below 97.6°F** is a red flag for metabolic downregulation — your body is slowing its engine to conserve energy. This is the earliest warning sign that calories may be too low, the deficit has been running too long, or thyroid function is suppressed.

- If we see a sustained drop, we can increase calories (refeed), adjust carb timing, or flag it for your physician to check thyroid labs — all before you hit a plateau or feel run down.

Adaptive Thermogenesis & Diet Response

When you diet — especially in a caloric deficit — your body can fight back through a process called adaptive thermogenesis. It literally turns down the thermostat to burn fewer calories and protect its fat stores.

- **A gradual temperature decline (0.3–0.5°F over 2–3 weeks)** while in a deficit tells us your metabolism is adapting. This is normal to a degree, but if it drops too far or too fast, we need to act.
- **What we do about it:** Strategic refeed days (temporary calorie increase, especially carbs) to signal to your body that it's not starving. This resets leptin signaling and bumps thermogenesis back up.
- **Why the recomp approach helps:** By keeping your deficit moderate (2,400 cal, not extreme) and protein very high (240g), we minimize adaptive thermogenesis. Your body has less reason to panic because it's getting enough fuel and building blocks.

Recovery, Stress & Overtraining

Your temperature also reflects your autonomic nervous system balance. For a BJJ athlete training 3–4x/week plus 4 lifting sessions, overtraining is a real risk.

- **A sudden temperature drop (0.5°F+ from your baseline)** after a hard training week can indicate overreaching — your nervous system is fatigued and recovery systems are taxed
- **A spike above your normal range** can indicate acute stress, inflammation, infection onset, or an immune response
- **Pattern recognition:** Over 4–6 weeks of data, we'll know your personal baseline. Then deviations become incredibly informative — we can see when your body needs a deload week, more sleep, or a protocol adjustment before you even feel it subjectively.

- **Cortisol connection:** Chronically elevated cortisol (from under-recovery, poor sleep, or life stress) suppresses thyroid conversion (T4→T3) and lowers waking temperature. If we see this pattern, we address stress and recovery, not just training volume.

Hormonal Health & Peptide Response

Temperature is a downstream marker of your entire hormonal cascade — not just thyroid, but testosterone, growth hormone, insulin sensitivity, and more.

- **Tracking response to peptides:** When we introduce CJC/Ipamorelin and Tesamorelin, we expect to see improved sleep, better recovery, and a stable or slightly elevated waking temperature over 4–6 weeks. If temperature doesn't respond, it tells us the peptide dose or timing may need adjustment.
- **Testosterone correlation:** Low waking temperature combined with fatigue, low motivation, and stalled strength gains can indicate low testosterone — something we'd flag for bloodwork to confirm.
- **Sleep quality feedback loop:** Peptides like CJC/Ipamorelin enhance deep sleep, which is when your body does the most recovery and hormone production. Improved sleep → better hormone output → higher waking temperature.

What to Expect

TEMPERATURE	WHAT IT MEANS	ACTION
98.0–98.6°F	Optimal. Metabolism humming, thyroid healthy, well-recovered.	Stay the course. Protocol is working.
97.6–97.9°F	Acceptable low-normal. Common during a caloric deficit. Monitor trend.	Watch for downward trend over 7–10 days. May schedule a refeed.
Below 97.5°F	Metabolic suppression likely. Thyroid, recovery, or caloric intake issue.	Notify coach immediately. Likely need calorie increase, deload, or thyroid labs.
Above 99.0°F	Possible infection, acute inflammation, or severe stress	Monitor. If sustained 2+ days, check with physician. Note any illness

TEMPERATURE	WHAT IT MEANS	ACTION
	response.	symptoms.

The Bottom Line

Most coaching programs only look at the scale and the mirror. We go deeper. Your daily temperature reading — combined with your weight, training logs, sleep data, and periodic InBody scans — gives us a complete metabolic picture. It takes 10 seconds each morning and gives your coach data that no other single metric can provide. Over time, this one habit will be one of the most valuable tools in your transformation toolkit.

Coach Recommendations

BJJ-SPECIFIC

BJJ-Specific Recovery

- **Contrast Showers (Post-BJJ):** 30 sec cold / 60 sec hot, 3–5 cycles. Reduces inflammation, speeds recovery, improves circulation. Do this after every rolling session.
- **Sleep Optimization:** Target 7.5–9 hours per night. This is where ALL your recovery happens. Dark room, cool (65–68°F), no screens 30 min before bed. Magnesium glycinate + CJC/Ipamorelin before bed enhances deep sleep quality.
- **Stress Management:** Between BJJ, lifting, work, and family — total stress load matters. If life stress is high, consider pulling back one BJJ session that week rather than pushing through and accumulating fatigue.
- **Skin Care:** Shower immediately after every BJJ session. Use Defense Soap or tea tree body wash. Check for any cuts, scrapes, or suspicious skin changes daily. BJJ gyms carry staph and ringworm — Thymosin Alpha-1 helps, but hygiene is your first line of defense.

BJJ-Specific Mobility Work

- **Hip Mobility (daily):** 90/90 switches, pigeon pose, frog stretch — 5 min minimum. Open hips = better guard, better passing, fewer back injuries.
- **Thoracic Spine (daily):** Foam roller T-spine extensions, open book rotations, cat/cow — 5 min. Critical for posture, framing, and preventing upper back stiffness from grappling.
- **Shoulder Mobility (training days):** Wall slides, band dislocates, sleeper stretch — 3 min before every upper body session. Your shoulders are your most vulnerable joint in BJJ.
- **Grip Recovery (post-BJJ):** Finger extensor band work, rice bucket, forearm stretching. Your grip is your weapon — take care of it.
- **Neck Stretches (daily):** Gentle cervical ROM work — chin tucks, lateral flexion holds, levator scapulae stretch. Never crank or force. Neck health = career longevity in grappling.

Weekly Schedule

DAY	TRAINING	CARDIO / BJJ	NOTES
Monday	Upper Push + Shoulder Prehab	BJJ (evening)	Weigh-in (fasted AM). High carb day.
Tuesday	Lower Body + Core	20 min incline walk post-lift	No BJJ — recovery from Monday double
Wednesday	OFF (lifting)	BJJ (evening)	Steps only (10K). High carb day.
Thursday	Upper Pull + Grip Work	20 min incline walk post-lift	No BJJ — let grip recover
Friday	Lower Body + Rotational Core	BJJ (evening)	High carb day.
Saturday	OFF	Open mat (light rolling) or mobility/yoga	Active recovery. 12K+ steps. Meal prep.
Sunday	OFF	Steps only (12K+)	Full rest. Meal prep. Mobility work.

Schedule Flexibility

This schedule pairs lifting and BJJ on the same day (AM lift / PM roll) on Monday, Wednesday, and Friday. If your gym schedule or energy doesn't allow doubles, you can shift BJJ to Tue/Thu/Sat and keep lifting Mon/Tue/Thu/Fri. The key principle: never do two hard BJJ sessions on consecutive days without a lifting-only or rest day in between. Listen to your body — if you feel crushed after 3 BJJ sessions, drop to 2 that week and add an extra incline walk day.

FORGED BY FREEDOM

BUILD THE BODY. FREE THE MIND.

This program is designed for Hayden Smith as a personalized coaching plan. It is not medical advice. All supplement, peptide, and compound recommendations should be reviewed with a licensed healthcare provider. Coordinate all protocol

changes with your physician. Injuries sustained during BJJ training should be evaluated by a sports medicine professional.
