F FORGED BY FREEDOM

Custom Coaching Program

Comprehensive Recomposition Protocol

Logan McDonald

Program Start: March 24, 2026

Client Overview

HEIGHT	CURRENT WEIGHT	GOAL WEIGHT
6'4"	300 lbs	240 lbs

TO LOSE	AGE
60 lbs	Mid-30s

- **Background:** Former athlete — has a strong training foundation to rebuild on
- **Occupation:** Engineer — desk-based, long hours, sedentary during work
- **Family:** Young family — time is limited, efficiency matters

- **Training Window:** TBD (recommend early AM or lunch — get it done before family obligations)
- **Medical:** No known conditions — discuss TRT with physician (see below)
- **Diet Approach:** High protein, moderate carb, structured meal prep for family-friendly efficiency
- **Weigh-In Day:** Monday mornings (fasted, before eating)

Logan's Edge

You used to be very athletic — that's a massive advantage. Your body has existing muscle memory (myonuclei don't go away), your CNS knows how to recruit motor units, and your frame at 6'4" can carry serious lean mass. You're not starting from scratch — you're reactivating a system that already knows how to perform. The combination of muscle memory + structured training + peptide support means you'll see results faster than a true beginner. The goal isn't just to lose weight — it's to uncover the athlete that's still in there.

🎯 Daily Targets

CALORIES	PROTEIN	CARBS
2,200	250g	150g
FATS	**DAILY STEPS**	**WATER**
65g	10,000	140oz

Why These Numbers

At 300 lbs and 6'4", your estimated maintenance is ~3,200–3,400 calories. We're running a 1,000+ calorie deficit — aggressive but sustainable with the peptide support (Reta + Tesofensine will crush appetite). Protein is set at 250g (0.83g/lb) to protect lean mass during the cut and fuel muscle memory reactivation. Carbs are timed around training for performance. Fats are kept moderate for hormone support. As you lean down, we'll adjust — but this is the launchpad.

FBF Recomp Protocol

HIGHLY RECOMMENDED

Body Recomposition — The Optimal Path

At 300 lbs with an athletic background, you are in a prime recomp window. Your body is carrying significant stored energy and has dormant muscle memory waiting to be reactivated. With Retatrutide, Tesofensine, and structured progressive overload, you can simultaneously drop serious body fat while rebuilding lean muscle. This isn't a crash diet — it's a systematic transformation that preserves your metabolic rate and builds a physique, not just a smaller version of where you are now.

How the Recomp Protocol Works

- **High Protein Anchor (250g/day):** Protein stays constant every single day. Non-negotiable — this is the guardrail that ensures you're losing fat, not muscle.
- **Strategic Carb Placement:** Carbs concentrated around training (pre/post workout) to fuel performance and recovery. Lower carb on rest days.
- **Aggressive But Sustainable Deficit:** 2,200 calories keeps you in a significant deficit (~1,000–1,200 below maintenance) but the peptide stack makes this feel manageable — not miserable.
- **Progressive Overload Training:** 5-day split hitting each muscle group hard once per week. The stimulus for muscle growth comes from systematically increasing weight/reps. Log everything.
- **Muscle Memory Advantage:** As a former athlete, your myonuclei are still there. Research shows previously trained individuals regain muscle 2–3x faster than true beginners. We're leveraging that.
- **Peptide + Compound Synergy:** Reta handles appetite and metabolic optimization, Tesofensine drives thermogenesis and dopamine-mediated motivation, and TRT (if cleared by your doc) ensures your hormonal foundation supports the recomp.

Expected Timeline

Weeks 1–4: Body adapts to training stimulus, strength climbs rapidly (muscle memory), Reta titrates up. Scale should start moving 2–4 lbs/week. Weeks 5–12: Visible transformation — face thins out, clothes fit differently, lifts are jumping weekly. Expect 20–30 lbs down. Weeks 12–24: Deep recomp territory — 40–60

lbs of fat lost, significant lean mass regained. You'll look and feel like a completely different person. Target: 240 lbs at a dramatically different body composition.

Training Program

5-DAY BRO SPLIT + CARDIO

Progressive overload: when you hit the top of the rep range with good form on all sets, increase weight by the smallest increment available next session. Log every set in the app. Dumbbells and machines over barbells for pressing — protects shoulders and allows better range of motion at your frame size.

Day 1 — Chest & Triceps

MONDAY

EXERCISE	SETS	REPS	REST
Dumbbell Incline Press 30° incline, full stretch at bottom, drive up explosively	4	8–10	90s
Machine Chest Press (Flat) Slow 3-sec eccentric, squeeze at contraction	4	10–12	75s
Cable Fly (Low-to-High) Targets upper chest, cross hands slightly at top	3	12–15	60s
Dumbbell Flat Fly Deep stretch, slight bend in elbows, controlled tempo	3	10–12	60s
Tricep Rope Pushdown Spread the rope at bottom, squeeze and hold 1 sec	3	12–15	60s
Overhead Dumbbell Tricep Extension Seated, deep stretch at bottom, single DB or EZ bar	3	10–12	60s
Tricep Dip Machine Lean slightly forward, full lockout at top	3	10–12	60s

Day 2 — Legs (Quad & Hamstring Focus)

TUESDAY

EXERCISE	SETS	REPS	REST
Leg Press Feet shoulder width, mid-platform, full depth — your long legs are an advantage here	4	10–12	2 min
Hack Squat Heels elevated on a plate if needed, deep range of motion	4	10–12	90s
Leg Extension Pause 2 sec at top, slow 3-sec eccentric	3	12–15	60s
Romanian Dumbbell Deadlift Dumbbells along sides, deep hinge, feel the hamstring stretch — your height gives great ROM	4	8–10	90s
Lying Leg Curl Squeeze at top, 3-sec negative	3	10–12	60s
Walking Dumbbell Lunges Controlled, long stride, don't rush — great for stability and athleticism	3	12/leg	75s
Standing Calf Raise (Machine) Full ROM, 2 sec pause at stretch, 1 sec squeeze at top	4	12–15	60s

Day 3 — Shoulders

WEDNESDAY

EXERCISE	SETS	REPS	REST
Dumbbell Shoulder Press (Seated) Neutral or pronated grip, no barbell — protects shoulders at your wingspan	4	8–10	90s
Machine Shoulder Press Controlled tempo, full range — use as a heavy secondary	3	10–12	75s
Cable Lateral Raise Behind the body, one arm at a time, controlled 2-sec up / 2-sec down	4	12–15	60s
Dumbbell Front Raise Alternating, slight lean forward, stop at eye level	3	12–15	60s
Machine Rear Delt Fly Light weight, squeeze and hold 2 sec — rear delts make or break the physique	4	15–20	45s
Face Pulls (Rope) Pull to forehead, externally rotate at end, 2-sec hold — critical for shoulder health	3	15–20	45s
Dumbbell Shrugs Heavy, hold at top 2 sec, controlled drop	3	12–15	60s

Day 4 — Back & Biceps

THURSDAY

EXERCISE	SETS	REPS	REST
Lat Pulldown (Wide Grip) Full stretch at top, drive elbows to hips — your long arms = huge ROM advantage	4	8–10	90s
Seated Cable Row (V-Handle) Close grip, squeeze shoulder blades 2 sec, controlled return	4	10–12	75s
Dumbbell Row (Single Arm) Bench supported, full stretch at bottom, row to hip	3	10–12	75s
Chest-Supported T-Bar Row or Machine Row Takes lower back out of it, pure lat/rhomboid isolation	3	10–12	75s
Straight-Arm Lat Pulldown Slight lean forward, squeeze lats hard at bottom, great finisher	3	12–15	60s
Dumbbell Bicep Curl Alternating, controlled — no swinging, ego stays at the door	3	10–12	60s
Incline Dumbbell Hammer Curl 45° bench, deep stretch, hits the long head and brachialis	3	10–12	60s
Cable Preacher Curl Constant tension, squeeze at top, 3-sec negative	3	12–15	60s

Day 5 — Extended Cardio & Core

FRIDAY

ACTIVITY	DURATION	INTENSITY	NOTES
Incline Treadmill Walk 12–15% incline, 3.0–3.5 mph	30 min	Zone 2	Fat-burning sweet spot — you should be able to hold a conversation
Stationary Bike or Rower Moderate resistance, steady pace	15 min	Zone 2–3	Switch it up — rower is great for your frame size
Farmer's Walk Heavy dumbbells, walk the gym floor	4 x 40 yds	Heavy	Grip, traps, core, conditioning — athlete builder
Hanging Knee Raise Controlled, no swinging — pause at top	3 x 12–15	—	Core stability for a big frame
Cable Woodchops High-to-low, rotate through core	3 x 12/side	—	Rotational strength — athletic carryover
Plank Hold Forearm plank, squeeze everything	3 x 45–60s	—	Foundational core — build up duration over weeks

Days 6 & 7 — Active Recovery (Weekend)

ACTIVE REST

ACTIVITY	TARGET	NOTES
Steps Higher goal on weekends	12,000–15,000 steps	Take the kids to the park, walk the neighborhood, hike — make it family time
Light Activity Nothing structured — just move	30–60 min	Bike ride with kids, shooting hoops, yard work, swimming — anything active and fun

ACTIVITY	TARGET	NOTES
Stretching / Mobility Hip flexors, hamstrings, thoracic spine	10–15 min	Sitting at a desk all week tightens everything — especially hip flexors at your height. Do this daily but prioritize weekends.

Cardio Protocol — Full Week

- **Monday–Thursday:** 10,000 steps minimum + 15 min incline treadmill walk post-workout (12% incline, 3.0 mph)
- **Friday:** Extended cardio session (45+ min total — see Day 5 above). Step goal still applies.
- **Saturday–Sunday:** 12,000–15,000 steps. No gym required. Family-friendly activities count. Get outside.
- **Weekly Step Total Target:** 75,000+ steps

Engineer Hack: Take all calls walking. Set a phone timer every 90 min to do a lap. Park at the far end of every lot. These micro-walks add up fast and break up the desk time that's killing your NEAT (non-exercise activity thermogenesis).

Meal Plan

HIGH PROTEIN · TIGHT MACROS

This is a tight plan — every meal is calculated. You have a young family so these meals are designed to be batch-preppable on Sunday. Your wife and kids can eat the same base proteins/veggies — just adjust portions. No exotic ingredients, no complicated recipes.

MEAL 1 — MORNING (6:00 AM)

Protein Oats + Egg Whites

1 scoop whey isolate stirred into 1/2 cup dry oats (cooked) with cinnamon. Side: 1.5 cups liquid egg whites scrambled with spinach and a splash of hot sauce.

470 cal **58g** protein **35g** carbs **8g** fat

MEAL 2 — MID-MORNING (9:30 AM)

Chicken & Rice

8 oz grilled chicken breast, diced, with 2/3 cup cooked jasmine rice and 1 cup steamed broccoli. Season with garlic powder, salt, pepper, and a squeeze of lemon.

480 cal **56g** protein **38g** carbs **8g** fat

MEAL 3 — LUNCH (12:30 PM)

Ground Turkey Power Bowl

8 oz 99% lean ground turkey browned with taco seasoning, over 2 cups mixed greens. Top with 1/4 avocado, diced tomato, jalapeños, and 2 tbsp salsa. Side: 1/3 cup black beans.

460 cal **54g** protein **25g** carbs **14g** fat

MEAL 4 — DINNER (6:00 PM)

Salmon & Roasted Vegetables

7 oz wild-caught salmon fillet, baked with lemon, garlic, and dill. Side: 1.5 cups roasted asparagus and zucchini tossed in 1 tsp olive oil. This is a meal the whole family can eat together.

450 cal **48g** protein **10g** carbs **24g** fat

MEAL 5 — EVENING (8:30 PM)

Casein Pudding + Cottage Cheese

1 scoop casein protein mixed thick with minimal water. Side: 3/4 cup low-fat cottage cheese with a sprinkle of cinnamon. Slow-digesting combo to fuel overnight recovery and muscle protein synthesis while you

sleep.

340 cal **50g** protein **12g** carbs **8g** fat

TOTAL CALORIES	TOTAL PROTEIN	TOTAL CARBS	TOTAL FATS
2,200	266g	120g	62g

Meal Prep Tips — Family Edition

- **Sunday Prep (90 min):** Bake all chicken breasts, cook ground turkey, bake salmon fillets. Roast all vegetables. Cook rice in bulk. Portion into containers.
- Make it a family activity — kids can wash veggies, your wife can season proteins. Assembly line.
- Pre-portion oats into jars with cinnamon — just add water in the morning.
- Keep salsa, hot sauce, and lemon on hand — zero-cal flavor game changers.
- **Water:** 140 oz minimum daily. Get a gallon jug. Carry it everywhere. Mark time goals on it.
- **Electrolytes:** Critical at this deficit — LMNT or similar. 1–2 servings/day.

Swap Options (keep macros the same)

- **Chicken** → 99% lean turkey breast, shrimp, or white fish (same oz)
- **Salmon** → Cod + 1.5 tsp olive oil, tuna steak, or tilapia + avocado
- **Jasmine Rice** → Sweet potato (equal carb grams), or quinoa
- **Egg whites** → 2 whole eggs + 1 cup egg whites
- **Ground turkey** → 96% lean ground beef, bison, or chicken breast
- **Broccoli** → Green beans, Brussels sprouts, cauliflower, zucchini

Weekly Shopping List

MEAL PREP

Everything for one week. Quantities for Logan only. Shop Sunday, prep Sunday afternoon.

ITEM	QTY (7 DAYS)	NOTES
PROTEIN		
Chicken Breast (boneless, skinless)	3.5 lbs	8oz/day × 7 = 56oz. Account for cooking shrinkage.

ITEM	QTY (7 DAYS)	NOTES
99% Lean Ground Turkey	3.5 lbs	8oz/day × 7 = 56oz. Two family packs.
Wild-Caught Salmon Fillets	3 lbs	7oz/day × 7 = 49oz. Fresh or frozen.
Liquid Egg Whites	3 cartons (32oz each)	1.5 cups/day × 7. Three cartons covers the week.
Low-Fat Cottage Cheese	2 large tubs (24oz)	3/4 cup per day for evening snack.
PROTEIN POWDER		
Whey Protein Isolate	1 tub (2 lb)	1 scoop/day in oats. Lasts 2+ weeks.
Casein Protein	1 tub (2 lb)	1 scoop/day before bed. Lasts 2+ weeks.
VEGETABLES & PRODUCE		
Broccoli (fresh crowns)	3–4 heads	1 cup/day steamed. Buy crowns for easy prep.
Asparagus	2 bunches	For dinner roast rotation.
Zucchini	4–5 medium	Roasted with dinner, low-cal volume food.
Baby Spinach	1 large container (16oz)	For egg white scrambles.
Mixed Greens	2 large containers (10oz each)	2 cups/day for lunch bowls.
Tomatoes	4–5	Diced for turkey bowls.
Avocados	2–3	1/4 per day. Buy firm.
Jalapeños	3–4	For turkey bowls. Optional.
Lemons	4–5	For chicken, salmon, and water.
Garlic	2 heads	For all proteins and roasted veggies.
PANTRY & GRAINS		

ITEM	QTY (7 DAYS)	NOTES
Old-Fashioned Oats	1 canister (18oz)	1/2 cup dry per day. Lasts 2+ weeks.
Jasmine Rice	1 bag (2 lb)	2/3 cup cooked per day. Lasts 2+ weeks.
Black Beans (canned, no salt added)	3 cans (15oz)	1/3 cup per day. Drain and rinse.
Olive Oil (extra virgin)	1 bottle	For roasting. Lasts weeks.
Salsa (fresh or jarred)	1 jar (16oz)	2 tbsp/day for turkey bowls. Near zero cal.
Taco Seasoning (low sodium)	2 packets	For ground turkey bowls.
Cinnamon	1 jar	For oats and cottage cheese. Lasts months.
Hot Sauce	1 bottle	Zero cal flavor. Use liberally.
BEVERAGES & ELECTROLYTES		
Water (gallon jugs or filter)	140oz/day target	Get a marked gallon jug. Carry it.
Sugar-Free Electrolyte Mix (LMNT)	1 box (30 ct) or 1 tub	1–2 servings/day. Non-negotiable at this deficit.
Coffee (black)	1 bag	Pre-workout or morning. Black only — no creamers.

Prep Day Game Plan (Sunday)

- **Step 1:** Season and bake all chicken breasts and salmon fillets (425°F, 20–25 min)
- **Step 2:** While protein bakes — chop broccoli, asparagus, zucchini, toss with olive oil, roast on sheet pans (400°F, 25 min)
- **Step 3:** Brown all ground turkey with taco seasoning in a large skillet
- **Step 4:** Cook rice in bulk — rice cooker makes this brainless
- **Step 5:** Portion oats into 7 jars with cinnamon. Drain and portion black beans.
- **Step 6:** Wash and chop salad greens, tomatoes — store with paper towel
- **Step 7:** Assemble containers — protein + carb + veggie per meal. Label M1–M5 if needed.
- **Total time:** ~90 minutes. Put a game on. Get the family involved.

Estimated Weekly Grocery Cost

- **Protein:** ~$70–90 (chicken, turkey, salmon, egg whites, cottage cheese)
- **Produce:** ~$25–35 (vegetables, avocados, lemons, garlic)
- **Pantry/Grains:** ~$12–18 (oats, rice, beans, oils, seasonings)
- **Beverages/Electrolytes:** ~$15–20 (LMNT, coffee)
- **Weekly total:** ~$120–165 (first week slightly higher for pantry staples)

Supplement Protocol

Creatine Monohydrate

5g/day

Any time — mix into oats, shake, or water

Most researched supplement ever. Strength, power, hydration, cognitive benefits. No loading phase needed — just 5g every day, forever. Safe, cheap, effective.

Potassium (Citrate or Gluconate)

99–200mg supplemental, 2x/day

With meals

At a big deficit with high water intake, potassium gets depleted. Prevents cramping, supports heart rhythm, and helps with the "flat" feeling. Get the rest from food (salmon, avocado, black beans are all potassium-rich).

Sodium (Electrolytes / LMNT)

1,000–2,000mg supplemental/day

Morning + intra-workout

LMNT packets are the easiest play. At this deficit and water intake, you need more sodium than you think. Prevents brain fog, fatigue, dizziness, and headaches. Don't fear salt — you're not eating processed food.

Whey Protein Isolate

1 scoop/day (25–30g protein)

Morning — in oats

Convenient protein delivery. Isolate over concentrate for lower calories/carbs per scoop.

Casein Protein

1 scoop/day (25g protein)

Before bed — mixed thick

Slow-release for 6–8 hours of overnight muscle protein synthesis. This is when you grow.

Omega-3 Fish Oil

2–3g EPA/DHA daily

With meals (split AM/PM)

Anti-inflammatory, joint support, heart health. Essential at your training volume. Get a quality brand — check the EPA/DHA per cap, not just "fish oil mg."

Magnesium Glycinate

400mg/day

Before bed

Sleep quality, muscle recovery, stress reduction. Most people are deficient. Glycinate form absorbs best and won't wreck your stomach.

Vitamin D3 + K2

5,000 IU D3 + 100mcg K2

Morning with a fat-containing meal

Immune function, testosterone support, bone health. If you're inside engineering all day, you need this. K2 directs calcium to bones, not arteries.

Zinc (Optional)

30mg/day

Before bed (with magnesium)

Supports testosterone production, immune function, and recovery. Especially useful if pursuing TRT conversation — optimize natural production first.

Compound Recommendations

PHYSICIAN GUIDED

Retatrutide (Reta) — The Metabolic Game-Changer

Retatrutide is a triple-hormone receptor agonist (GIP/GLP-1/Glucagon) that represents the most powerful metabolic compound available. At 300 lbs with 60 lbs to lose, Reta is the difference between a grind and a transformation. It crushes appetite, torches visceral fat, improves every metabolic marker, and makes adherence to this meal plan feel effortless.

Retatrutide — Why It Matters for Logan

- **Appetite Suppression:** The single biggest reason recomps fail is hunger. Reta eliminates this problem — you'll have to remind yourself to eat, not fight cravings.
- **Visceral Fat Targeting:** The glucagon receptor activation specifically targets deep abdominal fat — the metabolically dangerous stuff that drives inflammation, insulin resistance, and cardiovascular risk.
- **Metabolic Rate Preservation:** Unlike pure caloric restriction, Reta's glucagon activation increases resting metabolic rate — you burn more at rest even in a deficit.
- **Clinical Results:** Phase 2 trials showed up to 24% body weight reduction at 48 weeks. At your starting weight, that could mean 70+ lbs.
- **Cholesterol/Lipids:** Significant reductions in LDL, triglycerides, and inflammatory markers across all dose groups.
- **Liver Health:** Direct hepatic fat oxidation via glucagon receptor — dramatically reduces liver fat content.

Reta Titration Protocol (Discuss with Your Doctor)

- **Week 1–4:** 1mg/week subcutaneous injection
- **Week 5–8:** 2mg/week
- **Week 9–12:** 4mg/week
- **Week 13+:** 8mg/week (maintenance) or as tolerated
- Inject once weekly — same day each week. Rotate injection sites (abdomen, thigh).
- GI side effects (nausea, reduced appetite) are most common during titration. They subside. Stay hydrated.

Tesofensine — The Thermogenic Accelerator

- **Mechanism:** Triple monoamine reuptake inhibitor — blocks reuptake of serotonin, dopamine, and noradrenaline. This increases resting metabolic rate, suppresses appetite through a completely different pathway than Reta, and enhances motivation/mood.
- **Why It Pairs with Reta:** Reta works through gut hormones (GLP-1/GIP/Glucagon). Tesofensine works through brain neurotransmitters. Two completely different mechanisms = synergistic fat loss without diminishing returns.
- **Thermogenic Effect:** Clinical trials showed ~160 kcal/day increase in resting metabolic rate — that's an extra pound of fat loss every 3 weeks just from existing.
- **Mood & Energy:** The dopamine reuptake inhibition helps with the mental side of a big cut — better focus, motivation, and drive. Huge for an engineer who needs cognitive performance.
- **Dosing:** 0.25–0.5mg/day oral. Start at 0.25mg. Take in the morning — it can affect sleep if taken late.
- **Monitoring:** Can increase heart rate and blood pressure modestly. Track both weekly. Discuss with your physician.

TRT (Testosterone Replacement) — Discuss with Your Doctor

- **Why to Consider:** At 300 lbs in your mid-30s, there's a high probability your testosterone is suboptimal. Excess body fat converts testosterone to estrogen via aromatase. Sedentary desk work, stress, and poor sleep compound this. Low T = harder fat loss, less muscle building, worse mood, lower energy.
- **Step 1 — Get Labs:** Request a comprehensive hormone panel: Total Testosterone, Free Testosterone, SHBG, Estradiol (sensitive), LH, FSH, Prolactin, TSH, Free T3/T4, CBC, CMP, Lipid Panel, HbA1c, Fasting Insulin.
- **What to Look For:** Total T below 400 ng/dL and/or Free T in the bottom quartile of the range — especially with symptoms (fatigue, brain fog, low libido, difficulty losing fat) — makes a strong case for TRT.
- **If Prescribed:** Typical protocol is 100–200mg testosterone cypionate per week, split into 2 injections (SubQ). Your doctor will dial in dosing based on labs at 6-week follow-up.
- **Impact on** Optimized testosterone is a force multiplier — it dramatically accelerates muscle protein synthesis, improves fat oxidation, enhances recovery, and elevates

Recomp: mood/motivation. Combined with your training program and peptide stack, this completes the hormonal foundation.

- **Important:** Get bloodwork FIRST. Do not start TRT without a physician's supervision and baseline labs. We want data, not guesses.

Recommended Lab Panel — Get This Done Week 1

- **Hormones:** Total Testosterone, Free Testosterone, SHBG, Estradiol (sensitive), LH, FSH, Prolactin, DHEA-S, IGF-1
- **Thyroid:** TSH, Free T3, Free T4
- **Metabolic:** Fasting Glucose, Fasting Insulin, HbA1c, CMP (kidney/liver function)
- **Lipids:** Total Cholesterol, LDL, HDL, Triglycerides, Lp(a)
- **Blood:** CBC with differential
- **Inflammation:** hs-CRP, Homocysteine
- **Vitamins:** Vitamin D (25-OH), B12, Ferritin
- Request this from your PCP or use a direct-to-consumer lab (Marek Health, Quest, LabCorp). Get a baseline NOW so we can track every marker as the program progresses.

Coach Recommendations

Lifestyle Optimization — The 20% That Drives 80% of Results

- **Sleep 7–8 Hours:** This is where muscle is built and fat is burned. With a young family, this is hard — but it's the single most impactful variable. No screens 30 min before bed. Magnesium + casein pudding = your nighttime ritual. Dark, cool room.
- **Standing Desk or Desk Converter:** You're an engineer — you're sitting 8–10 hours. Get a standing desk converter (~$200–300) and alternate 30 min sitting / 30 min standing. This alone can burn 200+ extra calories/day via NEAT.
- **Walking Meetings:** Take every call you can while walking. AirPods + walk = steps + productivity. This is how you hit 10K steps without carving out extra time.
- **Train Early or at Lunch:** With a young family, evening workouts get blown up by dinner, bath time, bedtime routines. Lock in a morning or lunch slot that's non-negotiable. 60 minutes, in and out.
- **Weigh Daily, Track Weekly:** Step on the scale every morning (fasted, after bathroom). Don't react to daily fluctuations. Track the weekly average. That's your real number.
- **Progress Photos:** Same angle, same lighting, same time (morning, fasted) — every 2 weeks. At 300 lbs with muscle memory, you will see changes faster than you think. These photos will be your motivation when the scale stalls.
- **InBody Scan:** Get a baseline InBody scan (free at most gyms) in Week 1. Repeat monthly. This tracks lean mass vs fat mass — the scale doesn't tell the whole story during a recomp.
- **Stress Management:** Engineering + young family = high cortisol. Chronically elevated cortisol blocks fat loss and promotes visceral fat storage. The training, sleep, and peptide stack all help — but also consider 5–10 min of breathwork or a short walk when stress peaks.

What to Expect — Setting Honest Expectations

- **Week 1–2:** Water weight drops fast (5–8 lbs). You'll feel hungry before Reta fully kicks in. Muscles will be sore — you haven't done this in a while. This is normal. Push through.
- **Week 3–4:** Reta titrating up, appetite fading. Energy stabilizing. Strength increasing rapidly (muscle memory). You'll start to feel like yourself again.

- **Week 5–8:** This is where it gets fun. Clothes fitting different. Face thinning. People start noticing. Lifts jumping every session. The athlete is waking back up.
- **Week 9–12:** Deep transformation territory. 20–30 lbs down. Significant lean mass regained. You look and feel like a different person. Labs should show dramatic improvements.
- **Week 13–24:** We'll adjust macros, training volume, and compound dosing based on progress. Target: 240 lbs at a body composition that makes the old 300 unrecognizable.
- **The Scale Lie:** There will be weeks where the scale doesn't move but your waist shrinks and your lifts go up. That's recomp — you're losing fat and building muscle simultaneously. Trust the process. Trust the photos. Trust the measurements.

Weekly Schedule

DAY	TRAINING	CARDIO	STEPS	NOTES
Monday	Chest & Triceps	15 min incline walk post-workout	10,000	Weigh-in (fasted AM)
Tuesday	Legs	15 min incline walk post-workout	10,000	Heaviest day — eat Meal 2 (chicken + rice) pre-workout
Wednesday	Shoulders	15 min incline walk post-workout	10,000	—
Thursday	Back & Biceps	15 min incline walk post-workout	10,000	—
Friday	Extended Cardio + Core	45+ min (see Day 5)	10,000	No heavy lifting — conditioning focus
Saturday	Active Recovery	Family activity	12,000–15,000	Outside. With the family. Have fun.
Sunday	Active Recovery + Meal Prep	Walk / play with kids	12,000–15,000	Meal prep afternoon. Grocery shop AM.

Daily Check-In

Log Your Daily Check-In

Every day. No excuses. It takes 2 minutes. This is how we track progress and make adjustments. The data is everything.

CHECK IN NOW

Opens in the FBF app

Daily Temperature Check

What Is a Temperature Check?

Your daily check-in isn't just busywork — it's a metabolic temperature reading. Every data point you log (weight, sleep, energy, hunger, training performance, mood) feeds into a pattern that tells us whether your metabolism is humming or stalling. Here's what we're watching:

METRIC	GREEN (ON TRACK)	YELLOW (WATCH)	RED (ADJUST)
Weekly Weight Trend	Losing 2–4 lbs/week avg	Stalled 1 week	Stalled 2+ weeks or gaining
Energy Level	Stable, good workouts	Dipping in afternoon	Consistently low, brain fog
Sleep Quality	7+ hrs, waking rested	6–7 hrs, decent	Under 6 hrs, waking groggy
Hunger Level	Manageable, Reta working	Moderate hunger by evening	Constant hunger, cravings
Training Performance	Weights increasing or stable	Weights plateaued	Weights dropping, no energy
Mood	Motivated, positive	Some irritability	Low mood, no motivation
Steps	Hitting 10K+ daily	7–9K most days	Under 7K consistently

How We Use This Data

If you're in the green across the board — we don't change anything. If yellow flags pop up, we investigate (sleep? stress? hydration?). If reds appear, we adjust — macros, training volume, compound dosing, or recovery strategies. The daily check-in is the data that drives every decision. Without it, we're guessing. With it, we're engineering your transformation.

Baseline Assessments

Week 1 — Get These Done

- **Blood Lab Panel:** See recommended panel above. Get this done ASAP — we need baseline numbers before Reta and Tesofensine start. Request from PCP or order direct through Quest/LabCorp/Marek.
- **InBody Scan:** Free at most gyms (ask the front desk). Tracks lean mass, fat mass, water, and segmental analysis. This is your TRUE baseline — more useful than the scale alone. Repeat monthly.
- **Blood Pressure:** Get a baseline reading. Track weekly once Tesofensine starts. Home cuff is fine — Omron brand recommended.
- **Resting Heart Rate:** Note your baseline. Apple Watch or chest strap. Track weekly.
- **Progress Photos:** Front, side, back. Relaxed and flexed. Same lighting, same angle. Do this every 2 weeks. You'll thank yourself in 12 weeks.
- **Measurements:** Neck, chest, waist (at navel), hips, thigh, arm. Record and repeat bi-weekly.
